

DBANK

BUILT ON BLOCKCHAIN, POWERED BY PEOPLE

WWW.DYLANBANK.IO

About Us

Dylan is a 100% trustworthy Web 3 smart contract project built on polygon blockchain for the community. This project helps 90% of the world's common people to experience the real metaverse, crypto banking and generate income through them.

Dylan Bank:-The world's first AI & ML based decentralized crypto bank built on polygon blockchain. DBANK (Dylan bank) responds to the new breed banking & global money transfer systems, Payments, multi trading system, insurance solution & loan solution for all clint's.

Dylan World:- Dylan world is a VR Metaverse built on the Polygon blockchain. Worlds first under water metaverse to experience the treasure under the sea.

What Do You Know About Blockchain?

Blockchain Technology

Blockchain technology is an advanced database mechanism that allows transparent information sharing within a business network. A blockchain database stores data in blocks that are linked together in a chain. The data is chronologically consistent because you cannot delete or modify the chain without consensus from the network. As a result, you can use blockchain technology to create an unalterable or immutable ledger for tracking orders, payments, accounts, and other transactions. The system has built-in mechanisms that prevent unauthorized transaction entries and create consistency in the shared view of these transactions.

Features

1. Immutability
2. Better Security
3. Affordability
4. Minting
5. Faster Settlement
6. Transparent/Decentralized

Metaverse?

Metaverse is a virtual world where billions of people live, work, shop, learn and interact with each other, all from the comfort of their couches in the physical world. In this world, the computer screens we use today to connect to a worldwide web of information have become portals to a 3D virtual realm that's palpable like real life, only bigger and better. Digital facsimiles of ourselves, or avatars, move freely from one experience to another, taking our identities and our money with us.

Polygon **MATIC & DAI** Stable Coin

01

Polygon Matic

Polygon is a blockchain platform which aims to create a multi-chain blockchain system compatible with Ethereum. As with Ethereum, it uses a proof-of-stake consensus mechanism for processing transactions on-chain. Polygon's native token is named MATIC.

02

DAI Stable Coin

Dai is a stablecoin on the Ethereum blockchain whose value is kept as close to one United States dollar as possible through a system of decentralized participants incentivized by smart contracts to perform maintenance and governance functions. The supply of DAI cannot be altered by any party in the network, which offers complete transparency and security.

Welcome To

DBANK

(Complete Crypto Bank)

The world's first AI & ML based decentralized crypto bank built in polygon block chain. DBANK (Dylan bank) responds to the new breed banking & global money transfer systems, Payments, multi trading system, insurance solution & loan solution for all clint's. Our customer's banking journey is inspired by A multitude of research to understand their needs, Vison, and goals. Because DBANK is the future bank. DBANK is A blockchain, data base and AI & ML based innovative fintech solution based on web 3 and enabling the banked and unbanked transaction into crypto with ease and simplicity. - Duplicate The Same System Up To 8 orbit
- Refferal Reward accumilated to staking and will get 300% return from it.

DYLAN WORLD

The Real Metaverse

Dylan world is a VR Metaverse built on the Polygon blockchain. Worlds first under water metaverse to experience the treasure under the sea. We believe that the blockchain and DLT will become the future gold fundamentals for the entire metaverse ecosystem, and this represents the disruption of the multi-billion-dollar industry. Our goal, first and foremost, is to deliver a high-quality immersive experience by providing the users an environment where users can play, build, own, socialize and monetize their virtual experiences across multiple platforms, that also support the player-centric ecosystem via a dylan world tokenomic structure. Earning incentives should drive a player's desire to play a certain game, but we firmly believe that it should not be the only incentive. In Dylan world, players will be able to collect various pets, treasures, gemstones, and other collectibles as NFTs. Aside from collectibles users will be also able to create their assets, mini-games and build on top of their land plots. By actively participating and building in the metaverse, users are able to collect tokens and other rare assets as rewards for completing quests, clearing dungeons, and reaching leaderboards.
